```

```
ECORI; cDNA made by oligo-dT priming. Directionally cloned into ECORI/XhoI sites using the following 5' adaptor: GGCACGAG(G). Size-selected >500bp for average insert size 1.8kb. Library constructed by Ling Hong in the laboratory of Gerald M. Rubin (University of California, Berkeley) using ZAP-cDNA synthesis kit (Stratagene) and Superscript II RT (Life Technologies).*
```

-!- TISSUE SPECIFICITY: UBIQUITOUSLY EXPRESSED.
-!- PTM: THE N-TERMINUS IS BLOCKED.
-!- SIMILARITY: Contains 5 EF-hand calcium-binding domains.
-!- SIMILARITY: BELONGS TO PEFPIDASE FAMILY C2; ALSO KNOWN AS THE CALPAIN FAMILY OF THIOL PROTEASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -1- SUBCELLULAR LOCATION: Cytoplasmic; Translocates to the plasma

"Cloning of m-calpain from mouse nervous system.";

"I substrated in the calcium-regulated non-lysosomal thiol-protease which catalyze limited proteolysis of substrates involved in cytoskeletal remodelling and signal tranduction (By similarity).

"CATALYTE ACTIVITY: Preferential cleavage: Tyr-|-Xaa, Met-|-Xaa or Arg-|-Xaa with Leu or Val as the P2 residue."

"COPACTOR: Binds 3 calcium ions."

"I ENZYMER REGULATION: Activated by 200-1000 micromolar concentrations of calcium and inhibited by calpastatin.

"I SUBGRIAT: Heterodimer of a large (catalytic) and a small concentrations of calculatory) subunit.

"SUBGRIAT: Activated by Calpainic, Translocates to the plasma membrane                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                between the Swiss Institute of Bioinformatics and the EMBL outstation-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  130
                                      FUNCTION: Calcium-regulated non-lysosomal thiol-protease which catalyze limited proteolysis of substrates involved in cytoskeletal remodelling and signal tranduction.
CATALYTIC ACTYVITY: Preferential cleavage: Tyr-[-xaa, Met-[-xaa, Arg-]-xaa with Leu or Val as the P2 residue.
COPACTOR: BINDS 3 calcium ions (By similarity).
ENZYME REGULATION: Activated by micromolar concentrations of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        102
